Genetic monitoring, according to Schwartz et al. Genetic variation In addition to genetic differences among provenances, there is usually substantial genetic variation among trees within the same provenance and even within the same forest stand.

This is because: 1. We still do not understand gene expression well enough at the moment. It is very common to find patterns of adaptation that have evolved over many generations making provenances well suited to their local growing environments. Structural Organization of a Gene General Concepts The simplest model for the structural organization of a gene is one having a linear array of 3X nucleotides coding for a polypeptide of X amino acids. Recently, criteria and indicators have been developed for the conservation of genetic resources. Other non-journal formats are also indexed.
